Brand New Book ***** Print on Demand *****.Excerpt from Contributions to the Natural History of the Alligator (Crocodilus Mississippiensis): With a Microscopic Addendum The Fauna of even the most enlightened countries, seems to labor under the same evil which for ages retarded the progress of medicine, namely, an undue bias in favor of artificial classifications and nosological systems. The Crocodilian family affords a strong example of this arbitrary and illusory method of creating orders, genera, subgenera, species, and subspecies, in advance of exact physical data. The integumentary osseous plates, the feet, the claws, the toes, or the teeth, cannot be assumed as the classic criteria, until these shall be examined analytically and synthetically; an achievement which remains for the future, as the sequel will show. That the Alligator is identical with the Crocodile, can scarcely admit of a doubt. Even those naturalists who have labored most to establish a difference, have admitted directly or indirectly, that there is none of a radical character. As this animal is, nevertheless, modified to some extent by climate, it may be advantageous to adopt names characteristic of the...
