

A Text on Mathematical Economics

Filesize: 4.92 MB

Reviews

It is one of the most popular books. It really is filled with wisdom and knowledge. You may like how the author writes. I highly recommend this book.

(Kellie Huels)

A TEXT ON MATHEMATICAL ECONOMICS

To read **A Text on Mathematical Economics** eBook, remember to click the web link beneath and download the ebook or get access to other information which are have conjunction with A TEXT ON MATHEMATICAL ECONOMICS ebook.

Academic Foundation, 1995. Softcover. Book Condition: New. Mathematics has been an indispensable tool in economic analysis. Generally, most of the students are found to have, what is called, mathematics phobia. For them studying mathematical methods is somewhat unpleasant and taxing experience. Such an attitude, the authors feel (from their experience of teaching honors student), arises out of the students` inability to derive maximum benefit from a book due to complex presentation of its text. Even in cases, where presentation is simple, the lack of many solved examples minimizes the students` efficiency to grasp the concepts. An ideal way out of this would be to explain various concepts with the help of solved examples. In specially designing this textbook, the authors have made a sincere effort to incorporate the above methodology by presenting a variety of problems, after explaining every concept. These problems elucidate the concepts and their applications. Throughout the book, emphasis is given on applications rather than pure mathematical tools needed in economic analysis. Every concept in the book has been dealt with very patiently. The mathematics presented is easily accessible. However, this has not been done at the expense of rigour. The book contains more than 300 problems with solutions to give the reader sufficient practice and confidence. The book has been divided into five parts. Part - I contains the notion of sets, sequences, functions and analytical geometry with applications. Part- II is concerned with differential calculus with one independent variable. Limits and continuity, meaning of derivatives and applications of derivatives are discussed here. Part - III deals with logarithmic functions. Part - IV extends differentiation to multivariate functions. In this connection partial derivatives, differentials and optimization unconstrained as well as constrained are explained. Matrices and their application to linear models is discussed in Part - V....
